Politics Without a Price: Appendix

Table A1: Summary statistics for main variables

Variable	N	Mean	SD	Min	Max
A. Spending: municipality-quarter					
Public spending (PHP per resident)	2361	608.65	545.81	0.00	7058.59
Total spending (PHP per resident)	2361	813.08	721.65	0.00	11159.93
Yolanda exposure	2361	0.63	0.48	0.00	1.00
B. Procurement: awarded tender					
Destination support percentile	543	47.14	29.08	1.00	100.00
Negotiated procurement	4281	0.34	0.47	0.00	1.00
C. Welfare: endline outcome-specific samples					
All-destination access costs	682	0.10	0.39	-3.69	0.42
Road access	719	0.04	0.57	-6.38	1.12
School access	531	0.29	0.79	-1.56	3.24
Crop productivity	314	0.05	0.75	-0.50	6.46
School facilities / enrollment (village)	18	0.33	1.16	-1.10	4.06
Housing	1537	0.01	0.53	-1.93	1.88
Assets	2331	0.13	0.65	-0.50	15.19
Employment / earnings	3310	0.20	0.36	-1.19	9.51
D. Treatment, competition and core covariates: municipality					
Kalahi assignment	198	0.50	0.50	0.00	1.00
Competition (10pp units)	198	-0.03	2.81	-7.43	2.57
Assignment × competition	198	-0.00	2.05	-7.43	2.57
Dynasty status	198	0.10	0.30	0.00	1.00
Log population (2007)	198	10.10	0.74	7.56	11.69
Poverty incidence	198	47.30	9.40	33.67	69.09
Land area (sq. km)	198	218.06	251.65	4.68	1462.94
Number of barangays	198	24.68	14.98	4.00	95.00

Note: Outcomes use their corresponding main text estimation samples.

Table A2: Pretreatment covariate balance

Variable	Control mean (SD)	Treatment mean (SD)	Difference	Paired p	RI p
Public service spending pc	255.23 (208.43)	220.88 (120.71)	-34.34	0.063	0.065
Total spending pc	1757.68 (1309.92)	1601.99 (955.72)	-155.69	0.130	0.155
Poverty incidence	47.16 (9.57)	47.45 (9.27)	0.28	0.712	0.704
Number of villages	24.10 (13.39)	25.25 (16.46)	1.15	0.436	0.449
Population	30159.99 (21226.01)	31250.75 (19916.13)	1090.76	0.607	0.601
Land area	215.94 (259.56)	220.17 (244.79)	4.24	0.862	0.848
Joint balance	–	–	–	–	0.635

Note: Spending measures average available annual observations from 2001–2010, as treatment assignment was announced in 2011. Means and standard deviations use the same 198 municipalities in 99 complete treatment-control pairs. Conventional p-values use paired t-tests. Two-sided individual and joint randomization-inference p-values use 1,000 within-pair swaps.

Table A3: Budget categories and construction of spending outcomes

Budget category	Public	Total	Excluded
A. Current operating expenditure			
General public services	Yes	Yes	No
Education, culture, sports and manpower	Yes	Yes	No
Health, nutrition and population control	Yes	Yes	No
Housing and community development	Yes	Yes	No
Social services and social welfare	Yes	Yes	No
Labor and employment	No	Yes	No
Economic services	No	Yes	No
Debt interest and other charges	No	Yes	No
B. Non-operating expenditure			
Property, plant and equipment / capital outlay	No	Yes	No
Purchases of other entities' debt securities	No	Yes	No
Loans granted to other entities	No	Yes	No
Loan amortization	No	Yes	No
Bond / debt-security redemption	No	Yes	No
Other non-operating expenditure	No	Yes	No
C. Items outside the spending aggregates			
Prior-year accounts payable payments	No	No	Yes
Continuing appropriations	No	No	Yes
Non-income receipts (financing and asset receipts)	No	No	Yes

Table A4: Spending robustness to spillover effects

	Baseline	Standardized	Drop control units	Drop pairs
Kalahi treatment	-90.082***	-0.165***	-73.415**	-73.042**
	(26.318)	(0.048)	(25.233)	(25.180)
Matched-pair FE	X	X	X	X
Quarter FE	X	X	X	X
Observations	2,361	2,361	1,921	1,478

$^{+}p < 0.10$, $^{*}p < 0.05$, $^{**}p < 0.01$, $^{***}p < 0.001$. Standard errors in parentheses on the line below each coefficient.

Table A5: Spending results before the KC-NCDDP scale-up

	Public spending	Total spending	Competition	Competition
Specification	Baseline	Baseline	Baseline	Full controls
A. Full period				
Kalahi treatment	-90.082***	-88.053**	-82.347***	-77.683***
	(26.318)	(32.597)	(22.527)	(21.815)
Kalahi × competition			72.778**	60.670**
			(24.012)	(20.999)
Observations	2,361	2,361	2,361	2,301
B. Before scale-up				
Kalahi treatment	-80.926**	-88.554**	-72.454**	-66.460**
	(26.258)	(29.492)	(22.659)	(21.422)
Kalahi × competition			71.209**	58.385**
			(26.100)	(22.078)
Observations	1,174	1,174	1,174	1,144
Matched-pair FE	X	X	X	X
Quarter FE	X	X	X	X

$^{+}p < 0.10$, $^{*}p < 0.05$, $^{**}p < 0.01$, $^{***}p < 0.001$. Standard errors in parentheses on the line below each coefficient.
Note: Full period regressions use observations from 2013–2015. Early period regressions use observations through the second quarter of 2014.

Table A6: Robustness of spending results to alternative definitions of competition

	Margin (10pp)	Standardized	Rank	Close race	Top third
Kalahi treatment	-82.347***	-84.275***	-328.908**	-136.286**	-129.852**
	(22.527)	(22.951)	(114.781)	(42.638)	(40.433)
Kalahi x competition	72.778**	204.866**	493.979*	147.606*	142.650*
	(24.012)	(67.593)	(193.941)	(65.985)	(62.934)
Matched-pair FE	X	X	X	X	X
Quarter FE	X	X	X	X	X
Observations	2,361	2,361	2,361	2,361	2,361

$^{+}p < 0.10$, $^{*}p < 0.05$, $^{**}p < 0.01$, $^{***}p < 0.001$. Standard errors in parentheses on the line below each coefficient.

Figure A1: Distribution of electoral competition by treatment assignment

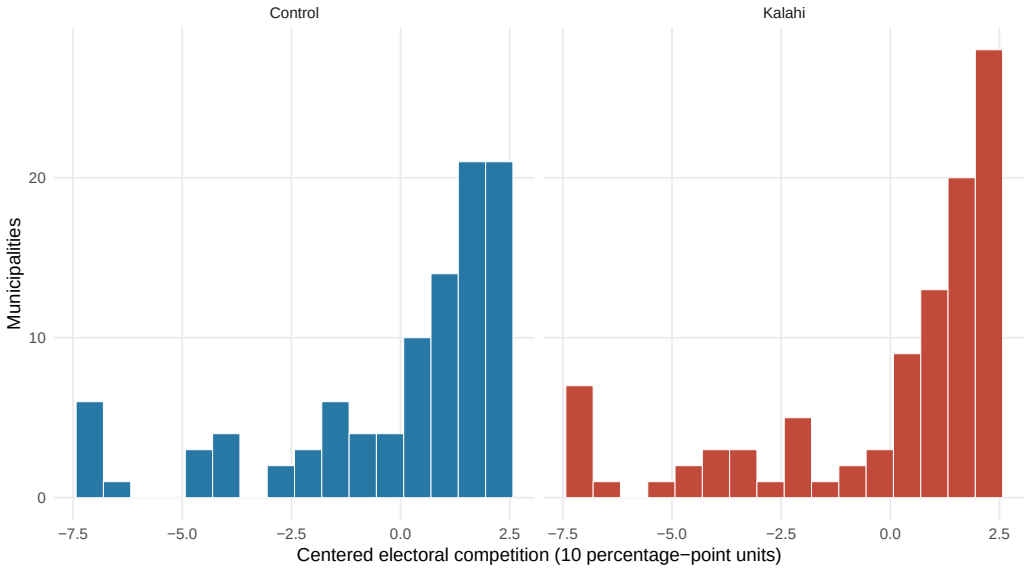

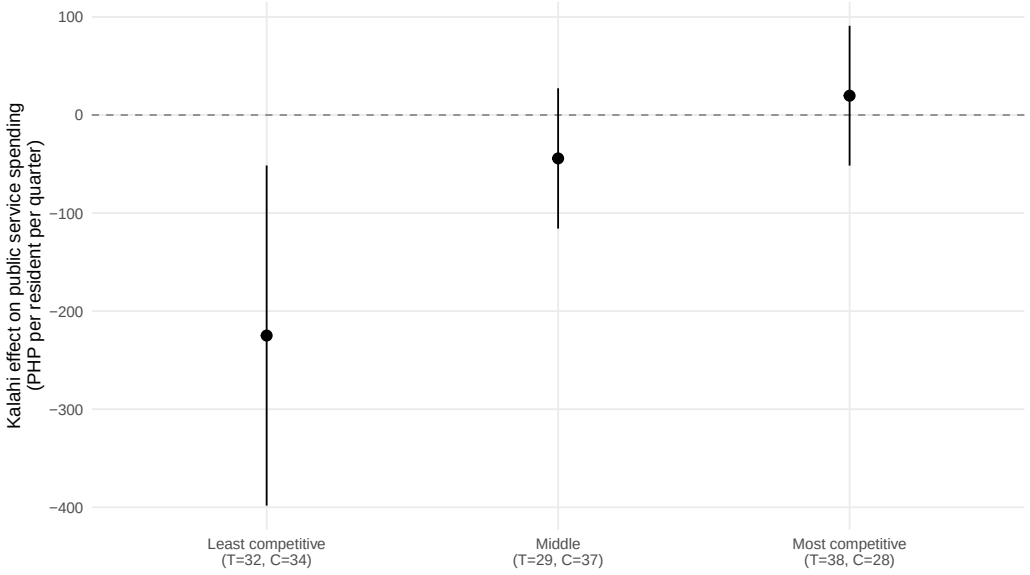

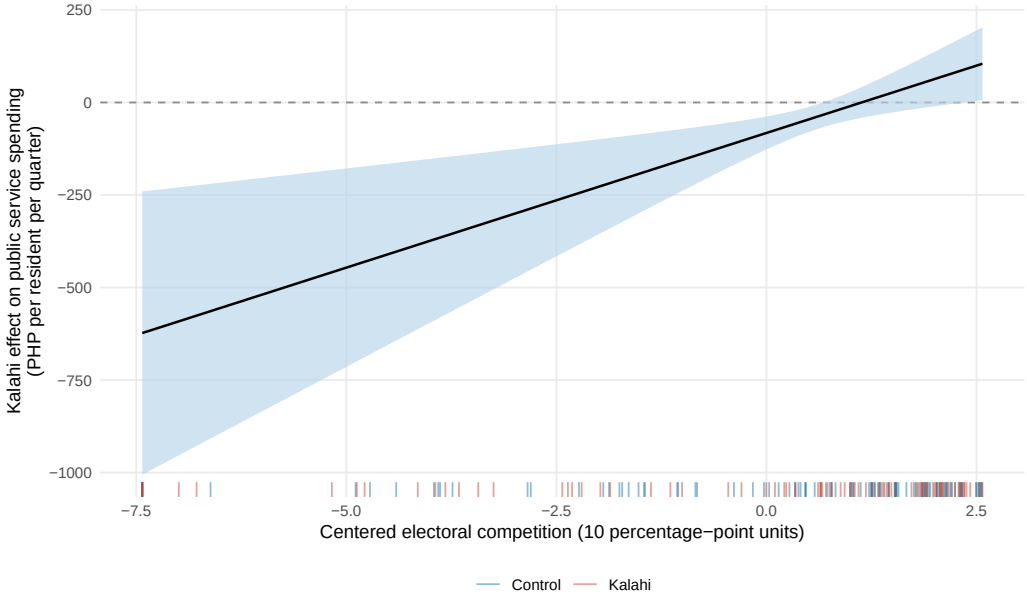

Figure A2: Treatment effects by electoral-competition tercile

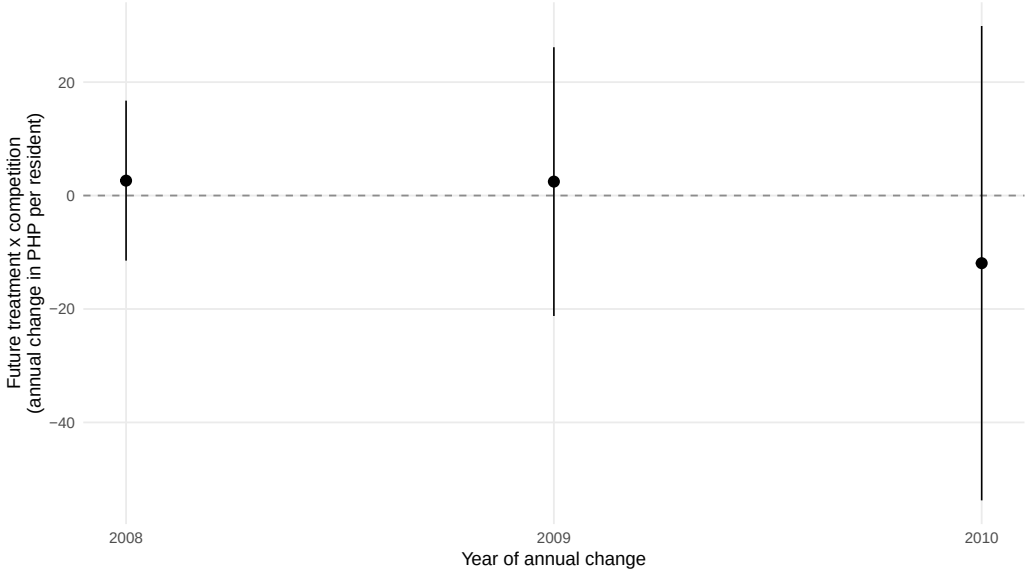

Note: Points and 95 percent confidence intervals are linear combinations from a pooled model interacting treatment with competition terciles. Standard errors are clustered by municipality.

Figure A3: Marginal effect of Kalahi across electoral competition

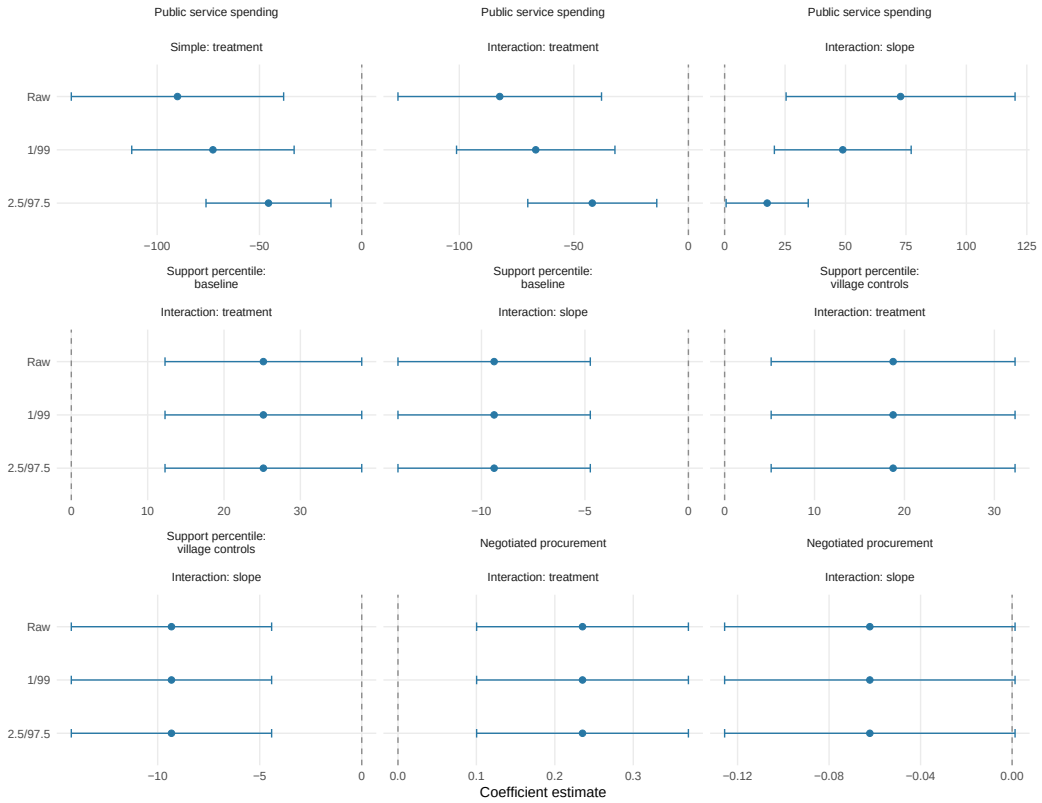

Note: The line shows the estimated treatment effect from the baseline linear interaction model. Shading indicates pointwise 95 percent confidence intervals using municipality-clustered standard errors. Rug marks show observed competition once per municipality, separately by treatment assignment.

Figure A4: Placebo moderation in pretreatment spending changes

Note: Year-specific regressions relate consecutive annual changes in public-service spending to future treatment, 2013 electoral competition, and their interaction. Only spending years strictly before the 2011 treatment assignment are included. Bars show pointwise 95 percent confidence intervals using municipality-clustered standard errors.

Figure A5: Winsorized spending and procurement results

Note: Points and 95 percent confidence intervals compare raw outcomes with winsorization at the 1st/99th and 2.5th/97.5th percentiles. Cutoffs are pooled across treatment arms on each raw model's fixed estimation sample. Models retain their main controls, matched-pair and quarter fixed effects, and municipality-clustered inference.

Table A7: Lin adjustment for spending results

	Public spending	Total spending	Competition	Competition
Specification	Baseline	Baseline	Baseline	Full controls
A. Main specification (recentered)				
Kalahi treatment	-90.082***	-88.053**	-84.275***	-78.292***
	(26.318)	(32.597)	(22.951)	(21.938)
Kalahi × competition			72.778**	60.670**
			(24.012)	(20.999)
B. Lin adjustment				
Kalahi treatment	-90.301***	-88.555**	-86.519***	-86.672***
	(24.601)	(30.991)	(22.277)	(21.584)
Kalahi × competition			63.139**	61.754**
			(19.102)	(19.429)
Matched-pair FE	X	X	X	X
Quarter FE	X	X	X	X
Observations	2,361	2,361	2,361	2,301

$^{+}p < 0.10$, $^{*}p < 0.05$, $^{**}p < 0.01$, $^{***}p < 0.001$. Standard errors in parentheses on the line below each coefficient.

Note: Estimates with municipality-clustered standard errors in parentheses. Current and adjusted specifications use identical samples and equal-municipality covariate centering. Lin adjustment interacts treatment with every demeaned covariate.

Table A8: Robustness to procurement outcome constructions

	Top quartile	Top decile
A. Baseline controls		
Kalahi treatment	0.475***	0.510***
	(0.113)	(0.089)
Kalahi × competition	-0.263***	-0.248***
	(0.044)	(0.038)
B. Village controls		
Kalahi treatment	0.393**	0.465***
	(0.113)	(0.088)
Kalahi × competition	-0.262***	-0.249***
	(0.042)	(0.035)
Matched-pair FE	X	X
Quarter FE	X	X
Observations	543	543

$^{+}p < 0.10$, $^{*}p < 0.05$, $^{**}p < 0.01$, $^{***}p < 0.001$. Standard errors in parentheses on the line below each coefficient.

Note: Estimates with municipality-clustered standard errors in parentheses. Each outcome indicates whether an awarded tender goes to a village in the specified upper support group. Outcome units are probabilities.
